How to Find the HP-UX Release Notes

The most current *HP-UX Release Notes* can be found on the Instant Information media and on the HP Technical Documentation Web site at

<http://docs.hp.com>

Keep in mind that the documents delivered on the Instant Information media can become outdated. To ensure you have the latest editions, visit the Web site as well.

Be sure to consult the edition most appropriate to your release. If you are concerned about the December 2005 release of HP-UX 11i v2, for instance, then you should begin with the *HP-UX 11i Version 2 December 2005 Release Notes* edition.

NOTE

You can determine the update release date and the Operating Environment by entering the following:

```
# swlist | grep HPUX11i
```

The resulting output will list the current release identifier, update release date, and Operating Environment. For example:

```
HPUX11i-TCOE          B.11.23.0403 HP-UX Technical Computing Operating  
Environment Component
```

The above revision string signifies the following:

B.11.23 = HP-UX 11i v2

0403 = March 2004 Update Release
